

ABC IT Education

WE'LL TAKE YOU FROM ZERO TO HERO IN A SNAP

Linux Systems Administration

Homework 5

Use your Home Centos for this Home work

show the command that will answer each

Using the 'training' directory created in the last home work

1. Set the permissions of all the files under the 'students' directory to read, write, execute for all user groups, using a wild card eg * or ?.
2. Create a 'jamesin' directory under the 'students' directory.
3. What are the default permissions of the 'jamesin' directory? Given the default permissions what is the umask and how would you find it?
4. Change directory to the 'jamesin' directory, then create a file called linux using the Nano Editor. In the file enter the test "I am studying Linus Systems Administration", save and exit
5. Show 2 ways to find the Linux groups you belong to.

6. Using 2 methods, find the `.bash_history` file in your system.
7. Beginning from your home directory
 - a. Find all files that contain 'in' in their name.
 - b. Find all directories only that contain 'in' in their name.
 - c. Find all files newer than the `.profile` file
 - d. Find all files older than 8 days but less that 15 days
 - e. Find all files less that 1 Megabyte in size
8. What are the default file and directory permissions if the `umask` is `0077`?
9. If my current `umask` is `0022` and I want to set it to `0002`, how would I do that?
